DIAMOND GRADING REPORT

GIA REPORT 8402354

June 12, 2007

Shape and Cutting Style **Round-Cornered
Rectangular Modified Brilliant**
Measurements **28.55 x 21.17 x 15.09 mm**

GRADING RESULTS

Carat Weight **76.02 carat**
Color Grade **D**
Clarity Grade **INTERNALLY FLAWLESS**

ADDITIONAL GRADING INFORMATION

Finish
Polish **Very Good**
Symmetry **Good**
Fluorescence **None**
Comments:
Minor details of polish are not shown.

KEY TO SYMBOLS

Red symbols denote internal characteristics (inclusions). Green or black symbols denote external characteristics (blemishes). Diagram is an approximate representation of the diamond, and symbols shown indicate type, position, and approximate size of clarity characteristics. All clarity characteristics may not be shown. Details of finish are not shown.

This Report is not a guarantee, valuation or appraisal and contains only the characteristics of the diamond described herein after it has been graded, tested, examined and analyzed by the GIA Laboratory and/or has been inscribed using the techniques and equipment used by the GIA Laboratory at the time of the examination and/or inscription. Incriptions reported in this document are not a guarantee, validation, or warranty of an article's quality, country of origin or source, or that the article will be identifiable by the inscription in the future (since inscriptions can be removed). GIA makes no representation concerning any trademark, word, or symbol which is inscribed by GIA or which is identified on the Report. The recipient of this Report may wish to consult a credentialed jeweler or gemologist about the information contained herein.

The security features in this document, including the hologram, security scan and engraving flow, in addition to those not listed, ensure document security integrity guarantees.

Supplemental Letter to GIA Diamond Grading Report #8402354

Scientists classify diamonds into two main “types” – type I and type II – based on the presence or absence of nitrogen which can replace carbon atoms in a diamond’s atomic structure. These two diamond types can be distinguished on the basis of differences in their chemical and physical properties. Type II diamonds contain little if any nitrogen and they are subdivided into two groups (IIa and IIb) both of which are quite rare (less than 2% of all gem diamonds).

According to the records of the GIA Laboratory, the 76.02 carat round-cornered rectangular modified brilliant diamond described in GIA Diamond Grading Report #8402354 has been determined to be a type IIa diamond. Type IIa diamonds are the most chemically pure type of diamond and often have exceptional optical transparency. Type IIa diamonds were first identified as originating from India (particularly from the Golconda region) but have since been recovered in all major diamond-producing regions of the world.

Among famous gem diamonds, the 530.20 carat *Cullinan* and the 105.60 carat *Koh-i-noor* are examples of type IIa. Please refer to the important limitations on the back of this document.

June 12, 2007

To Whom It May Concern:

Let this letter serve to report that upon examination, prior to and after re-cutting, we can confirm that the 76.02 carat diamond described in GIA Diamond Grading Report #8402354, dated June 12, 2007, was cut from the diamond known as the *Archduke Joseph Diamond*, previously weighing 76.45 carat described in the Report of the same number (#8402354), dated December 6, 1993.

Sincerely,

GIA Laboratory
